MACHINE VISION CONSULTING

IMPROVING VISION ACROSS INDUSTRY

Overview

Machine Vision Consulting's VisionGuard® product — compliment's Cognex's In-Sight™ Vision System by tracking all In-Sight™ events to support 21 CFR Part 11 compliance. VisionGuard® creates a protected-access front-end interface to provide the features necessary to include an In-Sight™-based vision system in a validated medical or pharmaceutical manufacturing application. VisionGuard® provides access-control, change tracking, and secure reporting of inspection data.

Operator Interface & Security Setup Examples

VisionGuard® Benefits

- ✧ Support for single and multiple In-Sight™ Vision Sensor installations
- ✧ Support for multiple user levels and multiple users, with passwords and specific permissions set for each user access level.
- ✧ Event tracking of any access (login/logout) to VisionGuard®.
 - ✦ Capturing the login ID and the time.
- ✧ Event tracking of any changes made to the In-Sight™ job file.
 - ✦ Capturing when the change was made, and
 - ✦ What element was changed (the original data in that element and the new data).
- ✧ Inspection data reported in a secure PDF format.
- ✧ Designed for ease-of-use and ease-of-changeover.
- ✧ Customizable by MVC to include application specific requirements

VisionGuard® has been developed by Machine Vision Consulting – an industry leader in machine vision solutions. To learn more about Machine Vision Consulting, visit our website at www.machinevc.com or call us at **978.551.4160**.

Note: Machine Vision Consulting does not offer a turnkey 21 CFR Part 11 compliant system that includes VisionGuard® or In-Sight Vision Sensors. Full compliance and validation require both procedural controls (i.e., notification, training, SOPs, etc.) and administrative controls to be put in place by the end-user. These are in addition to the access and event logging controls that VisionGuard® can offer. MVC's VisionGuard® is an application that supports many of the technical requirements of a compliant system.
